

AI Image Pro

Thanks for choosing AI Image Pro, Your WordPress AI Image Generator & Editor!

How to setup the plugin

The easiest way to know how to setup and use the plugin is to watch the following video, which gives you all what you need in order to start using the plugin:

[Watch Video](#)

AI Image Pro uses the best generative AI image engines to help you generate stunning AI images. At the moment the plugin is integrated with DALL.E (from OpenAI) and Stable Diffusion (from stability.ai).

To use these engines you need to have an OpenAI API key as well as a stability.ai API key. These keys are needed to connect the plugin with the engines so that it can utilize them to generate images.

The setup guide is divided into two parts; first part guides you through creating accounts on OpenAI & Stability.ai and generating your APIs, which you will need in the second part of the guide where you install and activate the plugin.

1. Creating an OpenAI account and getting API key:

Please follow the following steps in order to create your OpenAI's API key:

- Open <https://platform.openai.com/signup>
- Create a new account by either entering your email/password or you can choose to create a new account using Google or Microsoft sign-in.

Create your account

Email address

ed18b7

Enter the code shown above

Already have an account? [Log in](#)

OR

Continue with Google

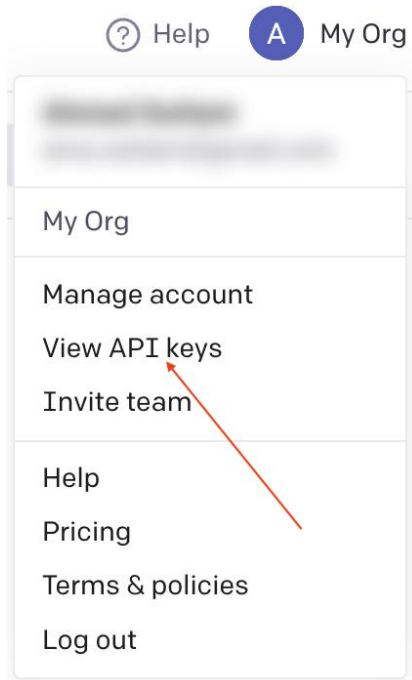

Continue with Microsoft Account

- At the time of writing, OpenAI gives out \$18 of free credit for their APIs so that you can test them. This credit is very generous and

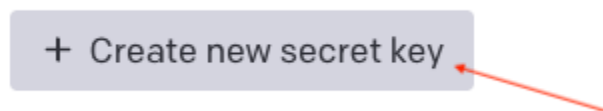

using it you will be able to generate lots of AI generated images.
(\$0.018/image on average)

Once this credit is used up, you will need to enter your credit card details and purchase extra credit.

- d. Once you're in, on the top left menu, then in the menu that appears click on "View API keys".

- e. On the "API keys" page, click on "Create new secret key".

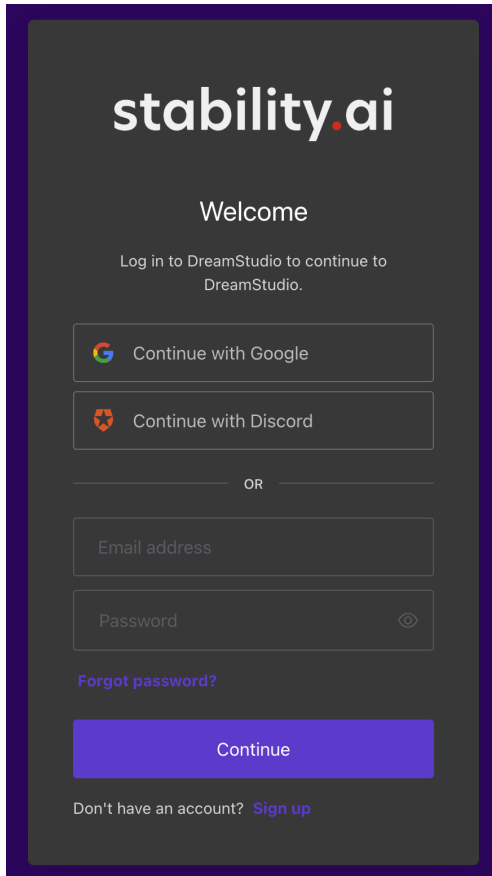

- f. A new API key will be generated for you. Now click on "Copy" button, and keep that key somewhere (maybe in a notepad) because you will need that key later once you install and activate the plugin (later in the steps)

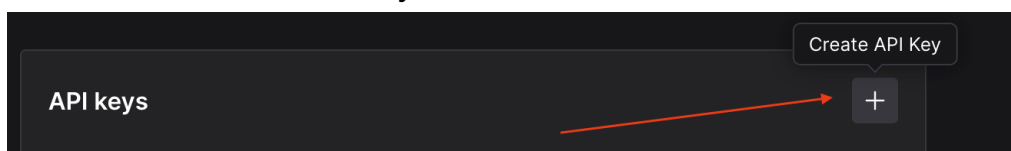

2. Creating a Stability.AI account and getting API key:

Please follow the following steps in order to create your Stability.AI's API key:

- a. Open [DreamStudio](#)
- b. On the top right, click on "Login".
- c. Choose a way to sign up then enter your information.

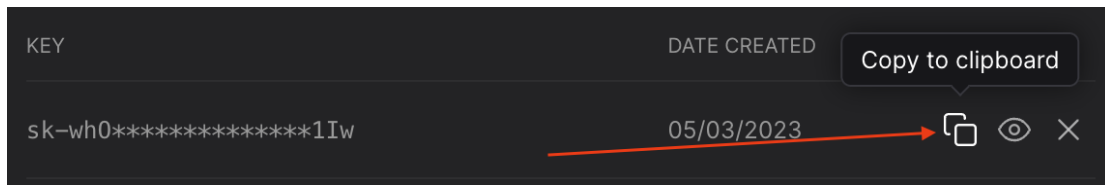

A screenshot of the Stability.ai login and sign-up page. The page has a dark background with the 'stability.ai' logo at the top. Below the logo is a 'Welcome' message and a prompt to 'Log in to DreamStudio to continue to DreamStudio.' There are two main options for signing in: 'Continue with Google' and 'Continue with Discord', each with its respective logo. Below these is a horizontal line with 'OR' in the center. Underneath is a form with an 'Email address' field and a 'Password' field with an eye icon for toggling visibility. A 'Forgot password?' link is located below the password field. At the bottom of the form is a large blue 'Continue' button. Below the button is a link that says 'Don't have an account? Sign up'.

- d. At the time of writing, Stability.AI gives out 100 credits of free credit for their APIs so that you can test them. This credit is very generous and using it you will be able to generate lots of AI generated images. (around 500 images)
- e. Once you sign-up, go to your account page: [DreamStudio Account](#)
- f. Click on "Create API Key":

- g. Click on "Copy to clipboard", then keep that key in a safe place (maybe in a notepad) as we will need it when activating and

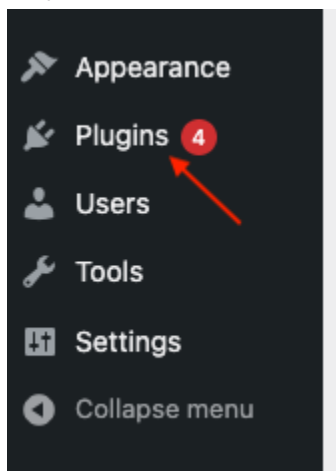

configuring the plugin later.

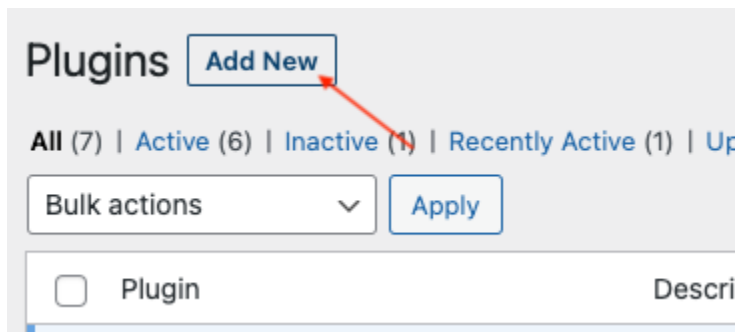

2. Installing and activating AI Image Pro:

After you purchase and download the plugin, please go through the following steps in order to install it on your WordPress website:

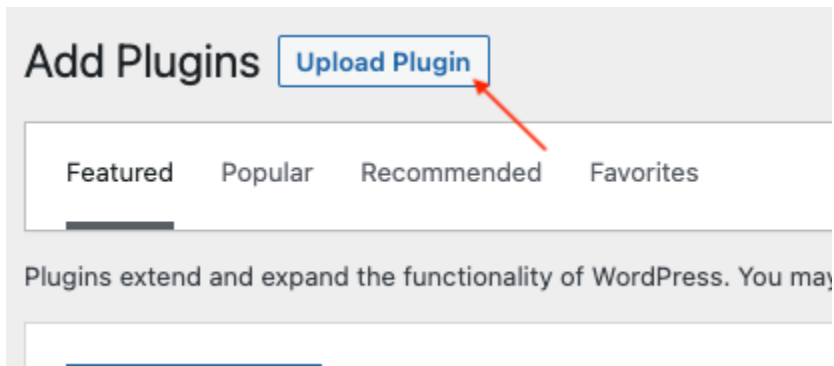

1. In your WordPress Admin page, on the left menu click on “Plugins”.

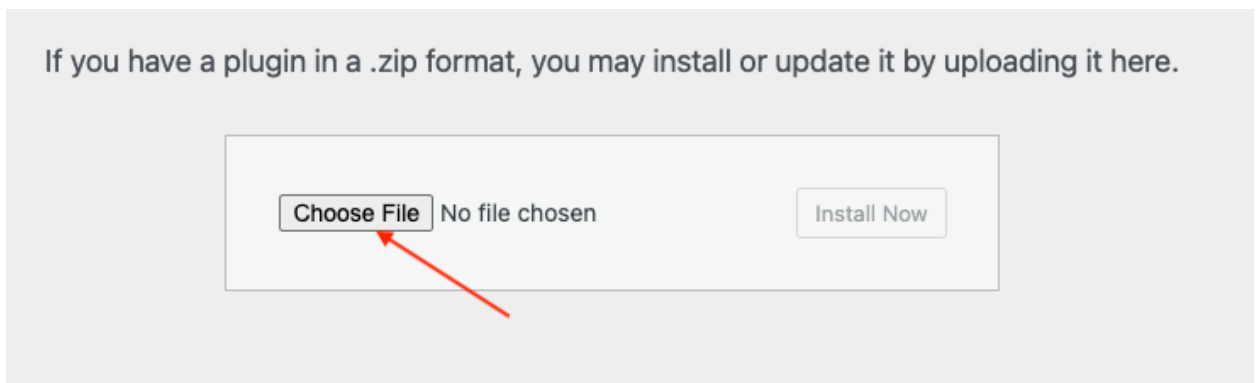

2. On the plugins page, click on “Add New” (top left).

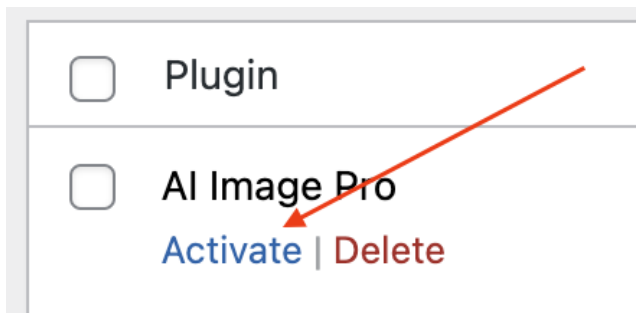

3. On the top left, click “Upload Plugin”

4. Then click on “Choose file”

5. Browse to the location where “ai-image-pro-plugin.zip” (plugin file) is located on your hard disk and choose it.
6. After uploading, you should be able to find “AI Image Pro” in the list of plugins.
7. Click on the “Activate” button under “AI Image Pro”.

8. With that step your plugin should be activated but you still need to add the API keys that we just generated above before unleashing the power of AI image generation.

How to configure & use AI Image Pro

Please watch the following video, which guides you through configuring the plugin and gives you a quick tour to understand the capabilities of the plugin and how to use it.

Watch Video

Front-end integration

AI Image Pro allows you to show the editor on the Frontend of your website if you prefer (only works for logged-in users), this can allow you to resell the service of generating AI images to your customers. (You will need an Extended license of the plugin to do that).

AI Image Pro comes ready with a user credit system, which allows you to set credit (image generations) for your users. You can use the following user metadata keys to set the credit for Dalle and Stable Diffusion image generations in case you want to integrate that with your payment/subscription system:

`ai_image_pro_dalle_credits` -> for dalle credits

`ai_image_pro_stable_diffusion_credits` -> for stable diffusion credits.

You can use the short code **[ai_image_pro]** to display the AI Image Pro editor in the frontend. You can pass the following short code options to customize the editor:

- **show_logo**: Set to "1" to show the AI Image Pro logo in frontend, "0" to hide it.
- **show_credits**: Set to 1 to show the user credits in frontend, "0" to hide it.
- **height**: Set the height of the editor in the frontend.
- **width**: Set the height of the editor in the frontend.
- **scrolling**: Set to "yes" to enable scrolling in frontend, "no" to disable it.

Example:

```
[ai_image_pro show_logo="0" show_credits="1" height="1200px"]
```

Important:

Please use a wide template for the page you plan to show the Frontend editor on so that the editor could be displayed with proper width.

In the settings page you can control whether you like to activate that or not, and also control which user role should be able to see the frontend editor and whether you want to enable the credit system.

Frontend Integration Settings

Configure how AI Image Pro will be integrated in frontend. You can use the short code `[ai_image_pro]` to display the AI Image Pro editor in frontend. You can pass the following short code options to customize the editor:

- `show_logo` : Set to "1" to show the AI Image Pro logo in frontend, "0" to hide it.
- `show_credits` : Set to 1 to show the user credits in frontend, "0" to hide it.
- `height` : Set the height of the editor in frontend.
- `width` : Set the height of the editor in frontend.
- `scrolling` : Set to "yes" to enable scrolling in frontend, "no" to disable it.

Enable in Frontend ☒
Enable AI Image Pro in frontend. If disabled, AI Image Pro will not be loaded in frontend.

Enable in Frontend For Role Contributor
Enable AI Image Pro in frontend for a specific role. If enabled, AI Image Pro will only be loaded in frontend for the selected role.

Enable Credits ☐
Enable Credits in frontend. If enabled, users will only be able to generate images if they have credit. User credit will be read from the following user meta keys: `ai_image_pro_dalle_credits` and `ai_image_pro_stable_diffusion_credits`. Make sure to set the values of these user meta data keys when you sign up your users to use your service.

There is also a settings screen that allows you to control the credit manually for each user you have.

Users & Credit

Collapse menu

AI Image Pro Users

This page allows you to view and edit the credits of users. User credits are stored in the user meta fields `ai_image_pro_dalle_credits` and `ai_image_pro_stable_diffusion_credits`.

Search by NameSearch

ID	Username	Dalle Credit	Stable Diffusion Credit	Actions
1	admin	8	16	Edit Credit
3	Tim	-	-	Edit Credit
2	John	7	-	Edit Credit

It's important to note that Admin users will always be able to see the Frontend editor and generate images.

Using Hooks to change use credits.

AI Image Pro provides two hooks that allow you to change user credits. You might find these handy when you integrate AI Image Pro with a membership plugin that allows you to offer the service as a SaaS to your customers.

Increase User Credit

```
do_action('ai_image_pro_increase_user_credit', [  
    'user_id' => 3,  
    'credit_amount' => 10,  
    'credit_type' => 'stable_diffusion',  
]);
```

Set User Credit

```
do_action('ai_image_pro_set_user_credit', [  
    'user_id' => 3,  
    'credit_amount' => 10,  
    'credit_type' => 'dalle',  
]);
```

“user_id” is the id of the user you want to update their score.

“credit_amount” is an integer

“credit_type” can be either “dalle” or “stable_diffusion” to update the score of the user to either of these AI systems.

Don't hesitate to contact us in case you have any questions or suggestions any time via CodeCanyon's messaging system.

I hope you have a great experience with AI Image Pro!
